

How to get your headers

1. Go to <https://useragentstring.com>
2. And copy the user agent string inside the box.

The screenshot shows the 'User Agent String.Com' website. At the top, there's a navigation bar with 'Home', 'List of User Agent Strings', 'Tools', and 'API'. Below the navigation bar, there's a section titled 'User Agent String explained :'. A text box within this section contains the user agent string: 'Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/112.0.0.0 Safari/537.36 OPR/98.0.0.0'. Below this, there's a detailed breakdown of the user agent string components for 'Chrome 112.0.0.0'. The breakdown includes fields like 'Mozilla', 'OS', 'Platform', 'WebKit', 'AppleWebKit', 'KHTML', 'Safari', 'Chrome', 'Version', 'Build', 'CPU', and 'Description'. Each field has a corresponding value and a brief explanation. For example, 'Mozilla' is 'Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/112.0.0.0 Safari/537.36 OPR/98.0.0.0' and 'Description' is 'This user agent string will be used to identify the browser. It is the name of the user agent string project behind Google Chrome, released under the BSD license.'
